TARGET ROLES

- Junior web / front-end developer
- IT support & web operations
- Travel-tech & airline ticketing
- Customer support & service desk
- Digital marketing & SEO
- Graduate trainee / internship

CORE STRENGTHS

- Sabre GDS air ticketing
- Reservation & itinerary support
- Customer communication
- Responsive web development
- SEO & digital growth
- Video editing & Canva design
- MS Word & MS Excel
- Calm, accurate, detail-first work

PROFESSIONAL SUMMARY

Computer Science & Engineering graduate (B.Sc. completed July 2026, CGPA 3.24 / 4.00) who already ships to production: **five paid client websites and web apps** built, deployed, and maintained for real businesses, each with a public URL and public source. Worked in travel operations at a Dhaka agency from March to August 2026, booking air tickets on **Sabre GDS** and handling reservation support and customer communication in Bangla and English. Seeking a role where accuracy, clear communication, and practical engineering skill all matter, while preparing to apply for M.Sc. study abroad.

GRADUATE STUDY OBJECTIVE

Applying for **M.Sc. / M.Eng. study abroad, 2027 intake** in computer science, software engineering, information systems, or data science. **IELTS scheduled shortly**. Research interests: applied machine learning for service automation, web-system performance and accessibility, and workflow automation for small businesses. Seeking scholarship- or assistantship-funded places.

PROFESSIONAL EXPERIENCE

Travel Operations & Ticketing Assistant

Mar 2026 – Aug 2026

Trip Fly BD — Travel Agency, Dhaka

- Issued and managed domestic and international air tickets end to end on **Sabre GDS** — fare display, reservation creation, reissue, and booking updates — with fare accuracy treated as non-negotiable.
- Owned each booking after it was made: itinerary changes, reservation queries, and travel documentation, so no customer had to chase their own status.
- Resolved fare, schedule, and travel-condition questions by phone, chat, and in person in **Bangla and English**, converting enquiries into confirmed bookings.
- Coordinated between customers and the internal team so confirmations, changes, and refunds closed inside the same working day.
- Identified that daily attendance was still tracked on paper and **built the Smart Attendance System** unprompted — a role-based web app now in daily use, replacing the manual register.
- Built and maintained the agency's **website sections and landing pages** (HTML, CSS, JavaScript), shipping changes without waiting on an outside vendor.

TECHNICAL SKILLS

TRAVEL SYSTEMS

Sabre GDS, air ticket booking, reservation handling, itinerary support

PROGRAMMING

C, C++, Java, Python, JavaScript

WEB

HTML5, CSS3, responsive and mobile-first UI, accessible layouts

TOOLS

Git & GitHub, GitHub Pages, Google Apps Script, Google Sheets

OFFICE

Microsoft Word, Microsoft Excel, Google Docs

CREATIVE

Video editing, Canva design, photography, presentation assets

WORKING STYLE

- Customer-first service attitude
- Clear written & verbal communication
- Accuracy under booking deadlines
- Team coordination & follow-up
- Fast to learn new systems

LANGUAGES

Independent Web Developer (Freelance)

Project-based, ongoing

Paid client projects — travel, real estate, consultancy, trading

- Delivered **five paid client websites and web apps** across travel, real estate, consultancy, and trading — every one still live in production, with a public URL and public source.
- Took each project from requirements to launch as the **sole developer**: design, build, content structure, deployment, client handover, and ongoing fixes.
- Built mobile-first, responsive layouts with accessible navigation, so the sites stay usable on the low-end Android devices most customers browse from.
- Structured pages for **SEO** — semantic markup, metadata, structured data, sitemaps — so clients reach customers through organic search rather than paid ads alone.
- Replaced paid form services with a **Google Apps Script + Sheets** lead-capture backend, giving clients reliable enquiry handling at zero running cost.

PUBLICATIONS

TumorMultiNet: A Statistically Validated Hybrid Deep Learning Framework for Brain Tumor MRI Classification and Segmentation on BRISC2025 with Explainable AI

IEEE — accepted

Hybrid deep learning framework for brain tumour MRI classification and segmentation, statistically validated on the BRISC2025 dataset, with explainable-AI interpretation of model decisions.

Smart IoT First Aid Box

In preparation

IoT-based first aid system for automated supply monitoring and emergency response support.
